

A company tracks the weight of packages shipped (in kilograms).
This variable is:

- ☐ a. Interval
- ☒ b. Continuous- ratio
- ☐ c. Nominal
- ☐ d. Discrete- ordinal

The number of visitors to a museum over a week are given below. Find the median:
430, 578, 491, 620, 710, 500, 675

- ☐ a. 560
- ☐ b. 530
- ☒ c. 578
- ☐ d. 620

Which of the following is an example of a qualitative variable?

- ☐ a. The time it takes to complete a task
- ☒ b. The zip code of a residence
- ☐ c. The temperature of a room
- ☐ d. The weight of a package

In Class X of a certain high school, 24% students failed in Biology, 20% failed in Chemistry and 8% students student is selected at random, the probability that he failed in chemistry given that he failed in biology.

☒ a. $1/3$

☐ b. $1/2$

☐ c. $5/6$

☐ d. $1/4$

Clear my choice

16% of the bulbs produced by a factory are white and 4% are white and defective. If one probability of its being defective if it is white?

☒ a. $1/4$

☐ b. $1/2$

☐ c. $1/3$

☐ d. $1/8$

Clear my choice

+

Let the random variable X denote the twice the number appearing on the die when a fair die

☐ a. 2.67

☒ b. 11.67

☐ c. 60.67

☐ d. 7.67

Clear my choice

The probability of finding a non defective bolt if out of 600 bolts, already examined 12 were

- ☒ a. $49/50$
- ☐ b. $48/50$
- ☐ c. $2/50$
- ☐ d. $1/50$

A cupboard A has 4 red carpets and 4 blue carpets and a cupboard B has 3 red carpets and 3 blue carpets. A cupboard is selected at random from a cupboard and the carpet is chosen from the selected cupboard such that each carpet has an equal chance of being chosen. Cupboards A and B can be selected in 1 and 3 ways respectively. Given that a blue carpet is chosen, find the probability that it came from the cupboard B.

- ☐ a. $2/5$
- ☐ b. $31/73$
- ☒ c. $15/19$
- ☐ d. $4/9$

Clear my choice

Two dice are thrown simultaneously. The probability that the sum of numbers on both exceeds

- ☐ a. $9/36$
- ☐ b. $4/36$
- ☐ c. $7/36$
- ☒ d. $10/36$

Clear my choice

A factory has two machines, A and B. Machine A produces 60% of the total output, and machine B produces 40%. The defect rates for A and B are 3% and 5%, respectively. If a product is randomly selected and found to be defective, the probability that it was produced by machine B?

- ☐ a. 59.34%
- ☒ b. 52.63%
- ☐ c. 42.36%
- ☐ d. 62.5%
